

## Dimensions for TAD Belly Pan Kit

The dimensions above represent a standard Belly Pan Kit. If these do not work for your application, these sizes can be altered. The left side of the belly pan is left short so that the pan may be removed from the chassis over the Pro-jack tabs. An additional left side panel is included with the kit to cover the left side of the chassis to the top rail. The width and length of the pans are the critical dimensions required to bend a custom size belly pan.
